

Environmental Management System

OUR CONTINUED COMMITMENT THROUGH ISO 14001:2015

 PR Polymers has recently put its best foot forward with their ongoing commitment for a better tomorrow by implementing a globally recognised “**Environmental Management System**” (EMS) in ISO 14001:2015.

 We are a very proud Australian manufacturer, that appreciates the importance of having an integrated Global ISO standard for both ISO 9001:2015 (Quality) and now ISO 14001:2015 (Environment).

 Our EMS is heavily structured around 3rd party and monthly internal audits for continued compliance where policies, procedures and ongoing strategies are the key to environmental sustainability.

 Our commitment is spearheaded from a senior level, across all members of our team who acknowledge the importance of the EMS and are committed and focused to making a difference. Goals and targets are much better achieved across our business in understanding the purpose of improving our EMS as a growing tool, rather than a tucked away policy or procedure not reviewed or improved.

 Our execution through Operations, design and manufacture to your door is reviewed with a more structured and regimented set of eyes guided through policy. Quality standards continue to be achieved through our tight QA controls (ISO 9001:2015) supported by a much broader commitment to our world.

 Our “KoolKap Down-Under Bags” are no exception to the rule and hold the lowest carbon footprint of any bag in the market today, using a “food grade” gas solubilised in a purified water solution as a controlled brew maintaining reduced risk and exposures. Perfect steps forward in providing the greatest industry standard, supporting and sustaining our environment for a better tomorrow.
